ABOUT CLEAN HARBORS

Clean Harbors (NYSE: CLH) is North America's leading provider of environmental and industrial services. The Company serves a diverse customer base, including a majority of Fortune 500 companies. Its customer base spans a number of industries, including chemical, manufacturing and refining, as well as numerous government agencies. These customers rely on Clean Harbors to deliver a broad range of services such as end-to-end hazardous waste management, emergency spill response, industrial cleaning and maintenance, and recycling services. Through its Safety-Kleen subsidiary, Clean Harbors is also a leading provider of parts washers and environmental services to commercial, industrial and automotive customers, as well as North America's largest re-refiner and recycler of used oil. Founded in 1980 and based in Massachusetts, Clean Harbors operates in the United States, Canada, Mexico, Puerto Rico and India. For more information, visit www.cleanharbors.com.

ABOUT THIS SUPPLEMENT

Clean Harbors is committed to transparency about the impacts and benefits of our business activities and actively evaluates how we as a company are addressing today's most important sustainability issues and trends with the intention to continually improve as an organization. Our sustainability program, across all lines of business, is designed to address the material environmental, societal and economic aspects of our organization. This supplement is intended as a companion to the Company's most recent comprehensive sustainability report released in 2024.

To identify those sustainability-related disclosures and aspects most material to the Clean Harbors business and operations, we continue to align with materiality mapping and guidance developed by the Sustainability Account Standards Board (SASB), part of the International Financial Reporting Standards (IFRS). We also disclose according to Global Reporting Initiative (GRI) Standards as well as report on select voluntary disclosures we believe are relevant to understanding our efforts toward sustainability, ESG activities and improvements, but may not be formally expressed in other frameworks.

Clean Harbors' commitment to sustainable corporate governance is reflected across our entire organization, starting with our [Executive Management and Board of Directors](#). Our Executive Management and Board provide critical oversight functions of the Company's sustainability programs and initiatives. The Corporate Governance and Sustainability Committee of the Board, working with Executive Management, is responsible for the oversight and engagement of sustainability at Clean Harbors, which includes reviewing this supplemental report.

For additional information on the Company's sustainability programs and policies, and to access our sustainability report and resources, please visit www.cleanharbors.com/about-us/sustainability.

Dear Stakeholders:

Everywhere industry meets the environment, Clean Harbors is there to provide environmentally responsible solutions for today's rapidly changing world. Clean Harbors is sustainable because our products and services directly and indirectly support our customer's environmental initiatives and enable their sustainability goals. The breadth of our service offerings, along with our focus on safety and investment in our people, position the Company for sustained success.

2024 was a record year for Clean Harbors. We delivered the highest revenue, adjusted EBITDA and adjusted free cash flow in our Company's history, all while achieving record safety performance as reflected by a Total Recordable Incident Rate (TRIR) of 0.61, adjusted for acquisition. This all-time low in TRIR protects our 25,000 employees and is central to our long-term success and sustainability.

Our key operational development in 2024 was the launch of our 70,000-ton rotary-kiln, high-temperature incinerator in Kimball, Nebraska. At a cost of \$210 million and taking five years to complete, this facility brings much needed commercial capacity into the marketplace. As our incineration capacity continues to expand and improve, so do the capabilities we can offer customers for the safe handling, transportation and disposal of complex waste streams such as PFAS and ozone-depleting substances.

In 2024, as the largest re-refiner and recycler of used oil in North America, we collected 253 million gallons of used oil and processed these used oil gallons into approximately 249 million gallons of new re-refined base oil, lubricants and byproducts. By collecting and then

re-refining this used oil, we helped avoid the creation of approximately 2.4 million metric tons of greenhouse gases (GHG) equivalent to the carbon sequestered by growing 39 million trees for 10 years.

As the largest environmental and industrial services company in North America, the success of Clean Harbors begins and ends with our people. We began 2025 with a workforce of 25,000 talented and well-trained employees who are second to none in our industry. For the past several years, we have made a concerted effort to invest in our workforce by expanding benefits, compensation, training, safety and opportunities for career advancement. These efforts align with our Company's goals to invest in and engage with our people.

This year we celebrate our 45th anniversary and look forward to continued future success. On behalf of our entire management team and Board of Directors, we want to thank our employees for their hard work, dedication and commitment to safety, which drove our record 2024 results. To our shareholders and customers, we are deeply grateful for the confidence you have in the Company. We are excited to execute our strategic vision, with a continued commitment to sustainability, and build long-term, sustainable stakeholder value in 2025 and beyond. Stay safe and well.

Michael L. Battles
Co-Chief Executive Officer

Eric W. Gerstenberg
Co-Chief Executive Officer

A TOTAL SOLUTION FOR THE FUTURE

Clean Harbors has been solving environmental challenges for over 45 years, and we are continuing that commitment with our Total PFAS Solution. As new legislation is passed in the U.S. and Canada, Clean Harbors remains ready to tackle it head-on and streamline compliance and services for the Company and our customers. Our comprehensive program offers protective, innovative and sustainable solutions that are fully vetted and proven to stand up to the toughest compounds in the world, including PFAS.

PROVEN PFAS MANAGEMENT AND DESTRUCTION

In 2024, we continued to develop and enhance our PFAS service offerings. Today, we are the foremost provider of PFAS management and destruction with our Total PFAS Solution. This comprehensive program is unique; we are the only company in the market that offers a fully integrated solution every step of the way. We have definitively proven our ability to eliminate PFAS at a 99.9999% level of destruction, and we sample, analyze, transport, remediate and destroy PFAS using our own extensive North American network. We provide long-term solutions for these forever chemicals, delivering the most effective and reliable PFAS management and environmental solutions available.

“Clean Harbors is sustainable because our products and services directly and indirectly support our customer's environmental initiatives and enable their sustainability goals.”

Michael L. Battles & Eric W. Gerstenberg, Co-Chief Executive Officers

Sustainability by the Numbers - 2024

Reported for the period of January 1, 2024, to December 31, 2024.

Wastewater Treatment Facilities (WWTFs) comprise only a portion of the estimated 4.5 billion gallons of liquids managed by Clean Harbors on a net annual basis.

SUSTAINABILITY RECOGNIZED

In 2024, Clean Harbors was included in the Corporate Knights' list of the 100 Most Sustainable Corporations in the World, ranking 13th globally and second among all U.S.-based companies. This recognition was announced in Davos, Switzerland, during the 54th annual meeting of the World Economic Forum.

Clean Harbors participates in numerous ESG and sustainability-related external assessments that include Carbon Disclosure Project (CDP), EcoVadis, S&P Global, MSCI, Sustainalytics, ISS-Corporate, Moody's Analytics, The Sustainability Project (TSP) and more.

To continually improve our environmental performance, and in compliance with internationally agreed upon standards and practice, our corporate headquarters' Environmental Management System, which provides oversight, administrative and compliance support for our environmental service centers, has been formally certified to the ISO 14001:2015 Environmental Management Systems standard.

Net Climate Benefit

We calculate the Net Climate Benefit Factor by adding the emissions avoidance benefit of our used-oil recycling, our solvent and materials recycling, and the compliant destruction of ozone-depleting substances (ODS). We then divide that number by the sum of the Company's Scope 1 and 2 emissions. We incorporate the EPA's Waste Reduction Model (WARM) to estimate GHG avoidance from the recycling of materials (scrap metal, electronic waste, mixed plastics), both at our facilities and for our customers. This estimate is combined with the GHG avoidance from our solvent-recycling operations. Emissions avoidance from ODS destruction is calculated by adding the quantities of ODS refrigerants and chemicals thermally destroyed at our facilities and converting these quantities based on Global Warming Potential as provided by the Intergovernmental Panel on Climate Change (IPCC). In 2024, through our sustainable services and products, we avoided more than twice the GHG emissions generated from operations, eliminating nearly 4 million metric tons of greenhouse gas.

4 million metric tons of GHG avoided is equivalent to:

GHG emissions from
10 BILLION
miles driven by an average gasoline-powered passenger vehicle

Carbon sequestered by
66 MILLION
tree seedlings grown for 10 years

GHG Scope 1: 1,630,826 mt CO2e	Greenhouse gas emissions from sources that are owned or controlled by the Company
GHG Scope 2: 123,852 mt CO2e (location based)	Greenhouse gas emissions from the consumption of electricity, heat or steam purchased by the Company

mt CO2e = metric tons carbon dioxide equivalent
Incorporates U.S. EPA Simplified GHG Emissions Calculator (SGEC) Version September 2024.
Scope 2: U.S. emissions calculated using the most conservative Emissions & Generation Resource Integrated Database (eGRID) sub-region emissions rate applicable to the Company's operational footprint.
Scope 2: emissions (CAN) integrate CER's *Provincial & Territorial Energy Profiles* as well as *Environment and Climate Change Canada's Emissions Factors & Reference – Version 2.0*
GHG disclosure in alignment with the IFRS Foundation's SASB Standards, Greenhouse Gas Protocol's Corporate Standard and IPCC Sixth Assessment Report

Calculating Our 2024 Net Climate Benefit (metric tons CO2e)

Goals and Benchmarks

OUR ENVIRONMENT

Clean Harbors is committed to the highest standard of excellence in health, safety and environmental stewardship. We are also committed to reviewing our corporate goals through an annual benchmarking process to ensure that our performance objectives remain relevant, meaningful and directionally aligned with the growth and development of our business. We are proud to provide this update on **OUR ENVIRONMENT** goals for 2030, which both reflect the current state of the Company and position us for long-term success and sustainability.

OUR ENVIRONMENT

Operational Efficiency

Reduce the environmental footprint of our operations by improving net climate benefit and reducing GHG intensity.

**Net Climate Benefit Factor ≥ 3.0 by 2030 |
Reduce GHG intensity ≤ 0.25**

We are committed to improving the efficiency of our environmental operations to scale with the growth of our Company. Progress toward this goal is measured by the Net Climate Benefit Factor and GHG intensity. Net Climate Benefit Factor is a metric that compares GHG emissions avoided by our Company through our sustainable customer services to our Company's net Scope 1 and Scope 2 emissions. GHG intensity reflects net Scope 1 and Scope 2 emissions as a function of revenue. In 2024, we both increased our Net Climate Benefit Factor and decreased GHG intensity to achieve the best performance levels in our reporting history, 2.3 and 0.30 respectively.

Recycling

Increase the recycling of materials by 25% on a combined basis by 2030 as compared to our 2019 baseline.

In 2024, we recycled 1.9 million metric tons of materials, a 31% increase from our 2019 baseline and surpassing our 2030 goal ahead of schedule. Our recycling services include the collection and processing of used oil, solvent, paint, e-waste, batteries, drums, chemicals, scrap metals and other materials. We continue to identify recycling opportunities for our customers and evaluate emerging recovery technologies.

Renewable Energy

Increase the use of renewable energy at our facilities by 50% by 2030 as compared to our 2019 baseline.

In 2024, 2,508 MWh were generated by solar arrays on our property, a 24% increase from our 2019 baseline. We estimate that approximately 20% of our electricity grid mix comes from renewable sources and we continuously look for ways to add renewable energy sources to power our facilities and operations.

For more information on Clean Harbors' sustainable services, products and programs, please see our comprehensive 2024 Sustainability Report hosted on our [dedicated website](#).

Goals and Benchmarks (Continued)

OUR ENVIRONMENT

Operational Efficiency

Reduce the environmental footprint of our operations by improving net climate benefit and reducing GHG intensity.

Net Climate Benefit ≥ 3.0 by 2030

GHG Emissions Avoided to Emissions Generated

Reduce GHG intensity ≤ 0.25

GHG Intensity in mt CO₂e/\$1,000 Revenue USD

Why this goal matters:

If we can avoid for our customers three times (3x) the GHG emissions we generate as a company, on a net basis compared to baseline, we can avoid 5 million metric tons of GHG emissions, which is equivalent to the emissions from more than 1 million gasoline-powered vehicles driven for 1 year!

Avoid emissions from 1 million vehicles

[EPA Greenhouse Gas Equivalencies Calculator](#)

Recycling

Increase the recycling of materials by 25% on a combined basis by 2030 as compared to our 2019 baseline.

Million Metric Tons Recycled Annually (M mt)

Why this goal matters:

In achieving this recycling goal ahead of schedule, we diverted for our customers 1.9 million metric tons of recyclables from landfills, conserving more than 2.6 million cubic yards of landfill airspace, equivalent to the volume of nearly 800 Olympic-sized swimming pools!

Diverted 1.9 million metric tons of recyclables from landfills

Renewable Energy

Increase the use of renewable energy at our facilities by 50% by 2030 as compared to our 2019 baseline.

Megawatt Hours Produced Annually (MWh/Year)

Why this goal matters:

3,027 MWh of renewable energy can power 276 homes' electricity use for one year!

[EPA Green Power Equivalency Calculator](#)

Power 276 U.S. homes

Goals and Benchmarks (Continued)

As the leading provider of environmental and industrial services throughout North America, the success of Clean Harbors begins and ends with our people. We are committed as a company to reviewing our goals through an annual benchmarking process to ensure that the objectives we've set remain relevant, meaningful and directionally aligned with the growth and development of Clean Harbors. We are proud to provide this update on **OUR PEOPLE** goals for 2030, which reflect both the current state of the Company and position us for long-term success and sustainability.

OUR PEOPLE

Protect Our Employees

Maintain industry-leading safety performance as measured by TRIR.

Safety is our #1 priority. At Clean Harbors, our safety goal must always remain zero incidents. In 2022, for the first time in our Company's history, we achieved a TRIR < 1.0, establishing Clean Harbors as an industry leader in safety performance. In 2024, we continued to improve our safety results as our TRIR, adjusted for acquisitions, was 0.61 – the best performance in our history. Our safety commitment is embodied in our Safety Starts with Me: Live It 3-6-5 program where employees link their behavior to their personal reasons to be safe.

During 2024, we made investments to enhance employee safety including more automation and enhanced reporting systems. We remain committed to keeping our people safe and maintaining an industry-leading record of safety excellence through 2030 and beyond.

Employee Engagement

Improve employee engagement by increasing participation in our Employee Engagement Surveys.

We want our employees to be proud to work at Clean Harbors, and we believe that employee engagement is best represented by the satisfaction of our workforce and likelihood of our employees to recommend Clean Harbors as a top employer. To measure that engagement, we carefully review responses from our employee survey and actively listen to and act on the feedback we receive. Our most recent Employee Engagement Survey was conducted in 2024, with 79% employee participation. By incorporating feedback from our employee surveys, we have made positive changes to employee benefits, recognition, training and development, and more.

Invest in Our Employees

Develop our people so that internal candidates fill a greater number of employment openings by 2030.

The sustainability of our Company depends on our ability to retain and develop the best internal talent. The Company is committed to identifying top performers and supporting their career success at Clean Harbors. In 2024, the Company promoted 1,075 employees and paid out more than \$2 million to employees through our lucrative referral program.

For more information on Clean Harbors' sustainable services, products and programs, please see our comprehensive 2024 Sustainability Report hosted on our [dedicated website](#).

SASB Disclosures - 2024 Accounting and Activity Metrics

SASB - IF WM Waste Management - Accounting Metrics

Statement of Use: Clean Harbors, Inc. has reported the information cited in this SASB Standard for the period of January 1, 2024 to December 31, 2024

Industry Standard Version: Sustainable Industry Classification System (SICS) IF-WM Version 2023-12

Code	Accounting Metrics	Category	Unit of Measure	Data, Omission & Explanation (2024)
Greenhouse Gas Emissions				
IF-WM-110a.1	(1) Gross global Scope 1 emissions, percentage covered under (2) emissions-limiting regulations and (3) emissions-reporting regulations	Quantitative	Metric tons (t), CO2-e Percentage (%)	(1) 1,630,826 t, (2) 79%, (3) 79% Scope 1 emissions include emissions from our facilities, landfills and fleet that are owned, leased or operated by Clean Harbors. We include operational processes in our Scope 1 calculation, some of which are estimates based on (a) waste composition and volume at our incinerators; (b) fuel and vapor extracted from used oil refining and used for heat; and (c) landfill gas generation estimates calculated using U.S. 40 CFR Part 98 Subpart HH and Subpart TT methodology. Except for fleet emissions, we believe that, sustainably, all our Scope 1 emissions are subject to emissions-limiting and emissions-reporting regulations.
IF-WM-110a.2	(1) Total landfill gas generated, (2) percentage flared and (3) percentage used for energy	Quantitative	Million British Thermal Units (MMBtu), Percentage (%)	(1) 153,348 MMBtu, (2) 0% flared, (3) 0% used for energy SASB guidelines request disclosure of the total landfill gas generated in millions of British Thermal Units (MMBtu) using calculation methodology U.S. 40 CFR 98.340-348 Subpart HH. This methodology is applicable to Municipal Solid Waste landfills with known margin of error of +/-200%. As of December 31, 2024, the Company operated seven commercial landfills and one noncommercial landfill. Of these landfills, only one landfill is subject to Subpart HH. This facility stopped receiving waste in 2020. The Subpart HH landfill facility's estimated landfill gas emissions were (1a) 57,422 MMBtu in 2024. Only two landfills regulated under Subpart TT are required to estimate emissions based on total waste volumes. Those two landfills estimated emissions using the methodology for Subpart TT were in aggregate (1b) 95,926 MMBtu in 2024. The other landfills the Company operates are hazardous waste landfills and, as such, are not regulated nor required to report GHG emissions, as their design and waste composition results in emissions below regulatory reporting thresholds.
IF-WM-110a.3	Discussion of long-term and short-term strategy or plan to manage Scope 1 emissions, emission-reduction targets, and an analysis of performance against those targets.	Discussion & Analysis	n/a	Over the next five years, we intend for our used oil recycling, solvent recycling and other materials recycling and recovery services, together with all of our sustainable solutions and products, to derive an environmental benefit of GHG emissions avoidance three times (3x) greater than aggregate emissions generated from operations. In 2024, that ratio was more than double at 2.3, a historic level of performance in our Company's history. Targets and Progress In this report, we have disclosed Scope 1 and Scope 2 emissions for reporting year 2024. We continue to monitor and report the Company's operational emissions data. We track and report progress toward the emissions-based metrics as part of Our Environment goal to reduce the environmental footprint of our operations by improving Net Climate Benefit and reducing GHG intensity. For reporting year 2024, Net Climate Benefit and GHG intensity were 2.3 and 0.30 respectively. Emissions Management and Strategy - Monitor and report progress toward Our Environment goal to reduce the environmental footprint of our operations by improving operational efficiency as measured by the emissions-based metrics of Net Climate Benefit and GHG intensity. - Invest in processes and technology to increase material recovery and recycling from waste processing. - Increase the contribution of purchased and produced renewable energy through investment in viable technologies. - Improve fuel economy in our fleet vehicles and further asset refurbishment. - Improve the efficiency of energy and water consumption at our facilities. - Evaluate the potential for landfill gas capture and incorporating other waste-to-energy opportunities. - Recycle greater volumes of materials through expanded sustainable service offerings. - Expand our Used Motor Oil Collection and Re-refining Services and our sustainable base oil products. - Broaden our Solvent Recovery and Ozone-Depleting Substance Destruction Services. - Extend our industry leadership in Spill and Disaster Response and Remediation Services. - Expand industrial Wastewater Treatment Services.

		Describe how the stakeholders who are the intended users of the grievance mechanisms are involved in the design, review, operation and improvement of these mechanisms	Qualitative	Code of Ethics , Vendor Code of Conduct , Corporate Governance	-
		Describe how the organization tracks the effectiveness of the grievance mechanisms and other remediation processes, and report examples of their effectiveness, including stakeholder feedback	Qualitative	Code of Ethics , Vendor Code of Conduct , Corporate Governance	-
GRI 2-26	Mechanisms for seeking advice and raising concerns	Describe the mechanisms for individuals to (1) seek advice on implementing the organization's policies and practices for responsible business conduct, (2) raise concerns about the organization's business conduct	Qualitative	Code of Ethics , Vendor Code of Conduct , Corporate Governance	-
GRI 2-27	Compliance with laws and regulations	Report the total number of significant instances of non-compliance with laws and regulations during the reporting period	-	Not available	We regard compliance with applicable regulations as a critical component of our overall operations and we maintain a compliance organization that is independent of the operations of the business to monitor and provide oversight at the highest levels of our organization. We strive to maintain strict professional standards in our compliance activities. Our compliance staff is responsible for the facilities' permitting and regulatory compliance, compliance training, transportation compliance and related record keeping. To ensure the effectiveness of our regulatory compliance program, our facilities operations are monitored by our compliance staff. Our facilities are also frequently inspected and audited by regulatory agencies, as well as by customers. Although our facilities have been cited on occasion for regulatory violations, we believe that each of our facilities is currently in substantial compliance with applicable permit requirements. Because of the scale of the Clean Harbor's business, we are subject to many local, state, federal, and international regulation. As such, aggregating incidences of non-compliance would not be representative of our compliance management across the Company. We have disclosed selected elements of environmental non-compliance in our SASB disclosure. Please also see our Annual Report for a comprehensive discussion of compliance risks related to the Clean Harbor's business and operations.
		Report the total number and the monetary value of fines for instances of noncompliance	-	Not available	
		Describe the significant instances of non-compliance	-	Not available	
		Describe how it has determined significant instances of non-compliance	-	Not available

SAFE HARBOR STATEMENT

This report contains certain forward-looking statements within the meaning of the Private Securities Litigation Reform Act of 1995. These forward-looking statements are generally identifiable by use of the words “believes,” “expects,” “intends,” “anticipates,” “plans to,” “seeks,” “should,” “estimates,” “projects,” “may,” “likely,” or similar expressions. Such statements may include, but are not limited to, estimates of greenhouse gas (“GHG”) avoidance, and other statements that are not historical facts. Such statements are based upon the beliefs and expectations of Clean Harbors’ management as of this date only and are subject to certain risks and uncertainties that could cause actual results to differ materially, including, without limitation, those items identified as “Risk Factors” in Clean Harbors’ most recently filed Form 10-K and Form 10-Q, which are available on the investor relations portion of our website www.cleanharbors.com. Clean Harbors’ ability to achieve any aspiration, target or objective outlined in this report is subject to numerous risks, many of which are outside of our control. Examples of such risks include but are not limited to advances in technology; laws, governmental regulation, policies, and other enabling actions; the availability and acceptability of cost-effective, verifiable carbon credits; the availability of suppliers; evolving regulatory requirements; evolving standards for tracking and reporting on emissions and emissions reductions and removals; customers’ and consumers’ preferences and use of the Company’s products or substitute products; and actions taken by the Company’s competitors. Further, standards of measurement and performance set forth in this report made in reference to environmental, social, governance, and other sustainability plans, goals and targets may be based on protocols, processes and assumptions that continue to evolve and are subject to change in the future, including due to the impact of future regulation. Forward-looking statements are neither historical facts nor assurances of future performance. Therefore, readers are cautioned not to place undue reliance on these forward-looking statements. Clean Harbors undertakes no obligation to revise or publicly release the results of any revision to these forward-looking statements.
