MULTIFACETED PERFORMANCE

15 priority targets included
in the GreenUp program

PAGES 8 | 21

DEVELOPING HUMAN CAPITAL TO SERVE COMMUNITIES

- Strong commitment to health, safety, and well-being at work
- Boosting performance through equal opportunities
- Leveraging training to deliver transformation
- Taking care of our people
- Employee engagement driving shared value
- Governance and organization

PAGES 22 | 33

CREATING VALUE FOR REGIONS AND RESIDENTS

- Supporting local economic development
- Ensuring essential services are accessible and resilient
- Making a lasting impact on communities

PAGES 34 | 48

BUILDING SUSTAINABLE ECOSYSTEMS

- Taking action to transform our purchasing processes
- Developing long-term dialogue with stakeholders
- Social dialogue: Veolia uses social innovations to transform regions
- Protecting human rights to ensure a just ecological transformation
- Acting together for a lasting impact

INTRODUCTION

This report on Veolia’s human resources and social performance reflects the need to ensure that ecological transformation is also a force for social progress. In a world beset by major crises, we believe that lasting environmental solutions can only be achieved if they offer positive social impact and are genuinely inclusive. Caring for people is at the heart of our multifaceted performance, our purpose and everything we do.

This report to our stakeholders sets out the concrete actions Veolia has taken to support its employees and act as a responsible partner to regions and the people who live in them. It is part of a comprehensive set of publications documenting our multifaceted performance, supplementing the detailed analyses provided in our Universal Registration Document and our Integrated Report as well as specialist reports on our environmental performance, the Climate Report and the Biodiversity Report. —

ECOLOGICAL TRANSFORMATION, THAT IS OUR PURPOSE

Ecological transformation means acting to reconcile human progress and environmental protection.

We develop and implement locally solutions to depollute our vital resources and preserve them from depletion, solutions to decarbonize our ways of living and producing and adapt them to the consequences of climate change. All over the world, attuned to local cultures, we strive to improve the health and quality of life of communities. At Veolia, we tackle economic, social and environmental issues as an inseparable whole to the benefit of the largest number of people.

“A business is successful, because it is useful and not the other way around.”

Antoine Frérot, Chairman of Veolia

“Our purpose embodies our ambition: to be useful to society by taking actions to reconcile human progress with environmental protection.”

Estelle Brachlianoff, Chief Executive Officer of Veolia

“Social and human resources performance is not an add-on, it is the cornerstone of our resilience and our ability to create lasting value. Because ecological security is the through line connecting all of today’s crises.”

Editorial

ESTELLE BRACHLIANO
Chief Executive Officer of Veolia

There is one belief that humanity has almost never questioned: that vital resources will always be available. Water, energy, strategic materials. We have built our civilizations, economies and lives on this belief. But it no longer applies.

All over the world, these resources have become pawns in power struggles. There is a lack of water. Critical metals are in short supply. Energy has become a tool for exerting geopolitical pressure. What we used to think of as natural flows are in reality fragile assets. Assets that are starting to run out. Against this backdrop, our responsibility extends

beyond simply managing the technical side of things. We are also responsible for protecting people, their health, security and ability to plan confidently for their future.

At Veolia, we are convinced that ecological transformation is not an end in itself. It is a means. The means to guarantee ecological security: a society’s capacity to continue to function in the face of mounting tensions. Decarbonizing, depolluting, regenerating: these actions are only of use when they create conditions where people everywhere can live stable, healthy and resilient lives. When they genuinely protect people.

This is the heart of our purpose: reconciling human progress with preserving life on earth. Not one regardless of the other. But one together with the other. This reconciliation is not just something we aspire to. It is a performance model where our success springs from our usefulness.

At Veolia, we have chosen a radical path, attaching as much weight to social and human resources concerns as we do to financial and environmental performance. This is what we call multifaceted performance. It is not a little extra something. It is our business model. We create financial value through our social and environmental engagement. Because we meet critical needs that touch every aspect of life in society: health, spending power, employment, industry. Our success is the fruit of our impact.

This model is built on two indivisible pillars: our employees, and the places where people live. Nothing durable can be built without the women and men who deliver this mission day in day out. This is why we have chosen to directly involve our 214,000 employees in our collective success, particularly with the Sequoia employee share ownership scheme that now owns over 9% of Veolia’s share capital. With Veolia Cares we provide a baseline

package of welfare benefits to every employee worldwide — healthcare, life assurance, parental leave, help for carers — even in places where the law offers no cover. And our commitment to their health and safety at work remains one of our highest priorities.

Our deep regional roots are equally essential. Our businesses in water, waste and energy are local by nature: they support jobs that cannot be relocated and guarantee access to essential services for millions of people. With our GreenUp strategy we support the transformation of towns, cities and regions to make them more resilient and attractive, improving the lives of the people who live there.

In an unstable world, this twofold commitment — to our employees and to the places where people live — is our greatest strength. Social and human resources performance is not an add-on, it is the cornerstone of our resilience and our ability to create lasting value. Because ecological security is the through line connecting all of today’s crises.

Geopolitics, economy, industry, health, employment: everything depends on a society’s ability to guarantee reliable access to vital resources. Ecological security in the 21st century is as strategic, vital and non-negotiable as national security. Protecting these resources guarantees social continuity, economic resilience and people’s well-being. Concern for social and human resources is not optional, it is the pillar of our collective resilience.

Because there is no more time to lose. Taking action is not moral posturing, it is a strategic decision. It is about delivering ecological security. For everybody. Everywhere.

“At Veolia, we have chosen a radical path, attaching as much weight to social and human resources concerns as we do to financial and environmental performance.”

“Every Resourcer is encouraged to think about their role in a wider context, with an emphasis on the positive impacts their actions have.”

3 questions TO ISABELLE QUAINON

Senior Vice-President Human Resources of Veolia

1 How does the multifaceted performance concept change the way Veolia supports its employees in their role as partners to our stakeholders?

Isabelle Quainon Multifaceted performance is central to Veolia’s strategy. It has triggered far-reaching changes in the support we give our employees, our Resourcecs. This all-round vision of performance takes account of financial, social, environmental, commercial and human resources considerations. It has led us to fundamentally rethink how we support our teams as they work for the benefit of customers, residents and local communities. Every Resourcer is encouraged to think about their role in a wider context, with an emphasis on the positive impacts their actions have across the entire ecosystem where they operate. This support is delivered through continuous training, career mobility pathways and upskilling programs that incorporate the issues surrounding sustainability and corporate social responsibility. It is also a way of making sure our employees feel their work is meaningful, that

they feel pride in being part of Veolia’s ecological transformation mission, something that our engagement surveys show that is already the case.

2 What are you putting in place to bolster sharing of knowledge and skills across the Group, accelerating impact in every part of the world where Veolia operates?

I.Q. Aside from our investment in employee training we are focusing on several structural mechanisms to encourage the spread of knowledge and skills within the Group. We have set up in-house collaborative platforms, communities of practice, mechanisms for peer-to-peer sharing, and expert networks that allow our people to talk to each other, share their experiences and innovate together. Regular seminars, workshops and webinars are organized to pass on details of the latest best practices and accelerate upskilling for all. We also encourage the co-construction of solutions with our local stakeholders so we can tailor

our responses to match the characteristics of each locality, maximizing our positive impact.

3 Artificial intelligence can transform our activities. What is being done to facilitate this transformation and ensure that it benefits all the women and men working in every area of Veolia?

I.Q. AI has to answer a fundamental question: how can this technology be used to enhance skills, improve processes, and bolster our environmental mission? AI is already extensively in use across all our activities, including for optimizing water networks, predictive maintenance for our plants and installations, and automated waste sorting and recovery. To strengthen rollout at scale and support all our employees as the transformation beds in, Veolia has launched a training program to help people get used to AI. It’s been an instant success, with over 35,000 active users, 800 types of uses identified, 1,500 champions trained, and 15,000 Resourcecs taught the basics at a series of collective workshops since 2024.

One of the goals of our GreenUp program is to make sure all employees are trained by 2027. To deliver this goal we are rolling out a complete set of tools tailored to suit everybody at Veolia. An e-learning module on understanding the basics of AI, the challenges and its role in transformation has already been completed by almost 20,000 people. Training and awareness campaigns are organized to support employees in their day-to-day working realities, so that AI can truly open the door to augmented working. Veolia also provides support and assistance to all its stakeholders and employee representatives. In 2026, we are also setting up observatories to look into how AI will continue transforming the activities and solutions that deliver ecological security.

MULTIFACETED PERFORMANCE: 15 PRIORITY TARGETS INCLUDED IN THE GREENUP PROGRAM

	Commitments	Goals	Indicators – definition	2023 baseline	2025 results	2027 targets	Executive Committee sponsors ⁽³⁾
Commercial performance	Guarantee long-term results via innovative services	Customer and consumer satisfaction	Customer satisfaction rate using the extended Net Promoter Score methodology (score and revenue coverage)	Not applicable	NP score = 57 covering 84% of revenue	Score ≥30 covering 80% of revenue	Nadège Petit
		Decarbonizing our customers Scope 4 ⁽¹⁾	Erased GHG emissions	13.45 Mt	+23.6% vs 2023	+30% vs 2023	Christophe Maquet
		Growth and innovation drivers	Revenue growth in priority business segments (energy, water technologies, hazardous waste)	€12,032 BN	+8.6%	CAGR ≥5% at constant exchange rates and energy prices, excluding planned disposals as at 01/01/2024	Anne Le Guennec (Water Technologies) Jean-François Nogrette (Hazardous Waste) Gavin Graveson (Energy)
Environmental performance	Combat pollution and accelerate ecological transformation	Decarbonization-reduction scopes 1 and 2	Reduction of GHG emissions scopes 1 and 2 ⁽²⁾	24.4 Mt CO ₂ eq. (baseline 2021)	-18.6% vs 2021	-18% vs 2021	Emmanuelle Menning
		Decarbonization-transformation of our facilities	Decarbonation Capex, including phase out of coal and methane capture (cumulative 2024-2027)	Not applicable	€141 M	€600 M	Philippe Guitard
		Freshwater saved and resource regeneration	Freshwater saved (reuse, desalination, leakage reduction)	1.4 BN m ³	1.574 BN m ³	≥1.5 BN m ³	Gustavo Miguecs
		Depollution-biodiversity	Protecting biodiversity at sensitive sites	59% progress rate for action plans (new scope)	80% progress rate for action plans	≥85% action plan progress rate	Sébastien Daziano
Human resources performance	Provide meaning and foster employee development and engagement	Health, safety and wellbeing	Lost time injury frequency rate (Veolia employees)	4.95	4.11	≤4.1	Estelle Brachlianoff
		Employee engagement	Employee engagement rate (Voice of Resourcecs survey)	89%	88%	≥ 85%	Laurent Obadia
		Diversity and inclusiveness	Proportion of women in the Group Management Committee	25.6%	37.1%	≥ 30%	Helman le Pas de Sécheval
Social performance	Support responsible regional development	Ethics and integrity	Positive answers to the ethics and compliance question in the “Voice of Resourcecs” survey	88%	88%	≥ 83%	Eric Haza
		Support for local communities	Residents benefiting from inclusive solutions to access essential services (all activities)	7.8 M	9.2 M (+18% vs. 2023)	8.4 M (constant 2023 scope)	Isabelle Quainon
Economic and financial performance	Increase prosperity and results over time	Profitability	Current net income - Group share	€1,335 M	€1,683 M	CAGR ~ 10% (FX constant, 2023 constant)	Emmanuelle Menning
		Investment capacity	Free cash flow (before discretionary growth investments)	€1,683 M	€1,782 M	Annual target	
		Return on capital employed	ROCE after tax	8.3%	9.4%	Annual target	

(1) Scope 4, erased emissions, is a specific notion Veolia uses to recognize third-party GHG emission reductions made possible by its decarbonizing solutions. Veolia warrants that scope 4 emissions are accounted for differently than emissions recognized under scopes 1, 2 and 3, and can in no circumstances be deducted from scopes 1, 2 and 3.
(2) % reduction compared to the 2021 baseline restated according to the new allocation method for GHG emissions in scopes 1, 2 and 3.
(3) As of the filing date of the 2025 Universal Registration Document.

DEVELOPING HUMAN CAPITAL TO SERVE COMMUNITIES

Veolia's employees are the number one drivers for change, ambassadors for lasting ecological transformation within their local communities. By putting its people at the heart of its strategy, Veolia makes powerful commitments and delivers real-world actions that support human development, inclusiveness, well-being and social dialogue in every part of the world where it operates.

The priorities for uplifting its employees center on health, safety, and well-being at work, local training and employability, diversity and inclusion, employee engagement, and quality social dialogue. These areas of focus reflect a commitment to shared value that combines economic performance with social and environmental impact to create sustainable and resilient regions.

- **Health, safety, and well-being at work** are central planks of Veolia's human resources policy, where strict standards and innovative mechanisms prevent risks, protect health, and promote quality of life at work.
- **Training and skills development** are pivotal to regional transformation. Veolia invests massively in upskilling for its employees and partners in a process that strengthens local employability and the ability of regions to successfully navigate their ecological and digital transition.
- **Diversity and inclusiveness** form another central pillar of Veolia's HR strategy that aims to ensure equal opportunities, prevent discrimination and promote gender equality, support the inclusion of people living with a disability, and foster social and cultural diversity, both locally and globally.

- **Veolia employees' involvement**, reflected in the high degree of participation in the annual Voice of Resources engagement survey and significant levels of employee share ownership, is a driver for performance and a vector for regional ecological transformation.
- **Lastly, carefully structured and open-ended social dialogue** with employees makes it possible to anticipate economic and social shifts, and to adapt HR policies to local realities.

Veolia bases the success of ecological transformation on the engagement, training, diversity and well-being of its people, in a drive to forge societies that are more inclusive and resilient while never varying from the essential principle that guides everything it does: respect for fundamental human rights is integral to its values, managerial practices, and its entire value chain.

Veolia's employees are the number one drivers of the changes that will deliver lasting ecological transformation.

STRONG COMMITMENT TO HEALTH, SAFETY, AND WELL-BEING AT WORK

Veolia is committed to an ambitious policy for health, safety, and well-being at work. Its carefully structured approach is designed to safeguard the physical and emotional well-being of everybody who works for or under the control of Veolia. All its stakeholders benefit thanks to an H&S prevention network in every part of the world where Veolia operates.

With unwavering backing from Veolia's CEO, its strategy for health, safety, and well-being at work is central to the Group's purpose and its GreenUp 2024-2027 strategic program.

Extensive health and safety prevention network

In every zone, business unit, country and entity, the H&S network makes sure that policies are consistently applied and comply with local cultural norms and regulatory requirements. Additionally, 30 international experts and 60 welfare and well-being correspondents form a center of excellence that uses a continuous improvement process to ensure that employee protection is always the highest priority.

Strict standards

Veolia's H&S prevention and social protection standards impose very strict requirements. The 10 management standards for high-risk activities and the 12 life-saving rules apply at every site, meaning that every employee benefits from the same degree of protection no matter where they are in the world. Rollout of standards and compliance with requirements is monitored annually at each business unit, with results consolidated at Group level so progress plans can be drafted.

Significant workforce impact

Results from the annual engagement survey reveal that 93% of employees consider health and safety to be very important at their business units. This is a full 19% above the industry benchmark. In 2025, 172,811 employees

WELL-BEING AT WORK PROGRESSING ACROSS THE GROUP

- The all-round approach to well-being at work is seen in the So'Well program. 89,928 employees took part in 2025, with a satisfaction score of 74/100 and a target of 80/100 by 2027.
- 82% of employees declare themselves satisfied with their work-life balance, while 7,600 employees from over 50 countries took part in national, European, and international sporting events.
- There has also been a greater focus by managers on improving well-being and preventing psychosocial risks. Efforts to tackle emerging challenges surrounding mental health in the workplace include the Leading with Care program that will train 4,000 managers by 2027, and setting up psychosocial support hotlines for all employees.

LOST TIME INJURY FREQUENCY RATE

received health and safety training, representing 79.7% of the workforce and close to 2.6 million hours of training. This massive mobilization is a reflection of Veolia's commitment to a culture of shared safety and employee protection. The frequency rate for lost-time accidents has been falling consistently since 2023, with the 2027 target of 4.1 coming close to achievement in 2025. As well as these improvements, there was also a 3% fall in workplace illnesses recorded between 2024 and 2025, and 39 countries met the target for zero lost-time accidents. This performance reflects the effectiveness of protective measures put in place and the direct impact they have on safeguarding workers' health.

Sharing knowledge as a driver for social progress

Veolia's collaborative platform for collating best practices from the field underwent a major overhaul in 2025, using artificial intelligence to make sure that information is shared as widely as possible. This upgrade helped boost overall standards for workplace safety and well-being, with the positive effects being felt across the entire industry. The platform fosters a copy and adapt mindset that encourages the spread of best practices for protecting workers.

Enhanced dialogue with social partners

12% of labor agreements now center on health and safety at work, testimony to an innovative, open-ended dialogue with employee representatives. Created in late 2022, the European working group led to the signature of a set of joint resolutions in April 2024, highlighting Veolia's ability to unite people behind the goal of improved social protection standards. Lastly, the annual International Health and Safety at Work Week is marked in every part of the world with a collective drive to improve working conditions.

Reaching out to include all stakeholders amplifies social impacts, with special attention focused on agency workers and contractors. A health and safety charter for agency workers was issued to employment agencies in 2024. This initiative was backed up with a satisfaction survey, running initially in France. The 92% satisfaction rate among agency workers shows the effectiveness of an inclusive approach that extends workplace protection to other groups, not just permanent employees.

By positioning health, safety and well-being at the heart of everything it does, Veolia ensures that caring for people is a lever for driving sustainable performance and collective progress for the benefit of society as a whole.

BOOSTING PERFORMANCE THROUGH EQUAL OPPORTUNITIES

Diversity and inclusiveness drive engagement, performance and local cohesion. They are central to Veolia’s regional and social strategies. These priorities are set out in its GreenUp 2024-2027 strategic plan and directly contribute to boosting regional employability, gender equality, and social resilience.

Rooted in the values of respect, solidarity, and respect for fundamental human rights, Veolia’s policy guarantees equal treatment and an environment where everybody feels recognized and fully accepted as part of the collective. These are non-negotiables for making ecological transformation a reality at the local level. The policy centers on 3 pillars:

- 1 fair, non-discriminatory HR procedures at every stage of the career path;
- 2 access to employment based on skills and motivation, encouraging local recruitment;
- 3 promotion of workplace social dialogue and free speech to embed cohesion at the regional level.

Global approach serving local realities

Driven by the Veolia Group’s HR department and implemented through a network of 60 or so correspondents and 40 local networks, the diversity and inclusion approach is designed to be consistent around the world and adapted to local realities. A 2025 diversity index of 79/100 illustrates its effectiveness. The approach focuses on 4 priorities: gender equality, gender diversity, disability, and socio-cultural diversity.

Concrete results

- 37.1% of the Management Committee are women, as are 33.1% of managers, with an equality index of 88/100 (France only).
- Almost 40,000 employees have already completed e-learning modules on combating sexism and sexual harassment.
- Almost 1,800 employees have completed the training module on “Disability: Let’s Build an Inclusive Environment Together”.

- 4,489 employees live with a disability (2.2% of workforce), and over 1,000 participants attended the International Neurodiversity Conference.
- The annual YES WEDO week showcases the commitment to boosting gender diversity in the workplace at Veolia. In 2025, 30,000 employees engaged with the WEDO network, which is present in 50 countries, running awareness-raising actions at schools and Veolia sites.

Initiatives such as “Green City” and “Better City” that are run in France, South Africa and Colombia promote social diversity and raise awareness about ecological transformation among young people from disadvantaged social groups. Veolia also engages with its economic ecosystem, incorporating inclusivity clauses into contracts with local employment agencies.

European and regional recognition

The European Diversity and Inclusion agreement signed in March 2025 applies to 17 countries and 125,000 employees. It creates a harmonized set of standards while protecting the ability to take local action, cementing Veolia’s role as a leading force in the construction of sustainable and inclusive regions.

Shared goals for greater fairness and resilience in regions

Veolia’s policies underscore its belief that diversity and inclusion are not just internal matters, they are drivers for regional cohesion and vitality that help to build fairer societies and accelerate ecological transformation in the places where its team members live and work. ■■■

VEOLIA SIGNS A HISTORIC AGREEMENT ON EQUAL OPPORTUNITIES AND INCLUSION

Background

March 26, 2025, saw Veolia sign an unprecedented Diversity and Inclusion agreement with trade union representatives and the European Federation of Public Service Unions (EPSU). Applicable in member countries of Veolia’s European Works Council (a social dialogue body representing almost two thirds of employees), it strengthens Veolia’s commitments on equal opportunity, inclusion, and respect for diversity.

Why?

The agreement seeks to create a working environment that is fairer, more inclusive, and more respectful while ensuring that everybody’s differences are recognized and protected. It is a strategically important lever for consolidating the Group’s collective project, growing well-being at work, and promoting equal opportunities for all.

How?

Ten key points to guide the implementation of concrete actions:

- social dialogue;
- training and/or awareness;
- anti-discrimination mechanisms;
- equal opportunities and equal pay;
- inclusion of people living with a disability;
- clarification of whistleblowing mechanisms;
- work-life balance;
- support for employees facing critical situations;
- local partnerships;
- development of networks, diversity and inclusiveness.

LEVERAGING TRAINING TO DELIVER TRANSFORMATION

Veolia’s commitment to training benefits its entire workforce, wherever they may be in the world. This concerted upskilling effort disseminates environmental expertise and encourages civic engagement, creating lasting ecosystems that favor ecological transformation.

By training its employees as well as its customers, partners and residents, Veolia works to spread understanding of the challenges of ecological transformation. This turns training into a lever for social transformation centered on inclusiveness and regional resilience. The training offered covers an extensive range of topics from the mandatory training required for certain jobs to personal and professional development courses, including a large number focused on environmental issues.

Employee upskilling benefits local communities

The scale of Veolia’s commitment to training is illustrated by the fact that 95% of its employees, over 210,000 people, received training. This equated to 31 training hours per employee in 2025, exceeding the target initially set for 2027. The impact is immediate, with an uptick in skills and employability at the local level. This local involvement is underpinned by partnerships with local training providers, regional vocational colleges and training centers, building bridges between Veolia, training providers and economic actors. Specialized technical programs, particularly for hazardous waste and decarbonized energy, create expertise that is rare and sought after, helping to consolidate excellence in the environmental services industry. This shows how training boosts the collective capacity to tackle the challenges of ecological transformation.

Raising awareness about environmental topics

Veolia’s social engagement is also delivered via programs to raise awareness about ecological issues. 10,000 participants were introduced to the Ecological Transformation Fresco by 400 in-house trainers. Close to 1,800 participants have taken part in the “2 Tons” workshops since 2023, while “Unlock Local Energies” has seen 1,500 participants since 2024, initiatives that build real awareness of climate-related issues and regional energy solutions. These new skills turn employees into ambassadors who can initiate and accelerate ecological transformation within their communities as well as among various other stakeholders.

Developing local leadership

Programs for managers and executives train a generation of leaders attuned to environmental and social concerns. The managerial skills they acquire, backed by Veolia’s culture and the Management Behaviors@Veolia guidelines, spread across the ecosystem through job mobility and networking. In addition, training people to be comfortable using generative artificial intelligence – 37,500 employees received training in 2025 with a 2027 target of 100% – puts regions where Veolia operates at the forefront of digital transformation. In addition to AI, 84% of employees who took part in the engagement survey⁽¹⁾ feel their skills have improved, underlining a virtuous circle rooted in professional fulfillment that stimulates engagement and builds loyalty. —

LATIN AMERICA: TEAM TRAINING LEADS TO IMPROVED TAP WATER QUALITY

Background

Veolia Latin America, in partnership with Spain’s Escuela del Agua, has been running a training program called “Water Treatment Plant” for mid-level operational managers at drinking water and wastewater treatment plants since 2017.

Why?

- Increasing teams’ skills is essential to ensuring that water resources are managed efficiently and sustainably.
- The program aims to improve tap water quality, helping to protect public health and general well-being.
- It improves team members’ technical and managerial skills, in turn boosting employability among people employed by Veolia and its partners.

This approach leads to water services that are more environmentally responsible and sustainable thanks to better energy efficiency at treatment plants coupled with lower water losses in the network.

How?

Participants follow a masterclass looking at the complete water cycle for drinking water and wastewater. The program combines theory with site visits and networking opportunities. The hybrid approach provides interactive, real-world learning designed to be directly actionable at water treatment plants.

Benefits

- Uplift in tap water quality and positive public health benefits.
- Local upskilling and talent development in operational teams.
- Promotion of regional collaboration and the spread of good environmental practices.
- Management of water resources in Latin America that is more sustainable and inclusive.

3 challenges tackled
and 10 good practices to copy and adapt

4 operational visits

and 2 training courses on purification and wastewater

TAKING CARE OF OUR PEOPLE

Veolia’s salary and employee benefits policy is designed to reward the day-to-day engagement of its workforce, guarantee equal opportunities, and provide secure career paths in a very wide range of economic and social settings in different countries.

Responsible wage policy, tailored to local realities

Veolia recognizes the importance of the living wage concept, which means employees earn enough to cover the basics, mindful of local social and economic realities. In every country where it operates, Veolia is careful to ensure that salary payments are aligned with local legal minimums and, for operational employees in particular, that basic pay is set at levels above the legal minimum where possible.

In addition, Veolia has embarked on a process designed to improve its insights into the living wage concept, over and above legal minimums. An initial pilot in 2023 looked at 6 countries that account for a significant portion of the total workforce, aiming to analyze any discrepancies between current wage levels and amounts needed to meet basic household needs.

A second phase in 2025 added a further six countries to the sample, providing a more broad-based comparison. This approach makes it possible to be globally consistent while also adapting to realities in the field for activities that are local by nature and cannot be delocalized. Results showed that over 98% of workers covered by the study are paid at least the benchmark living wage for their country. An in-depth analysis of the results will be carried out in 2026 to implement local action plans.

Veolia Cares: benefits to help at every stage of life

As well as a salary, Veolia provides a common base level of welfare benefits designed to complement existing public arrangements, particularly in countries with limited benefit provision. Veolia Cares sets out to offer employees a minimal level of welfare benefits in 5 areas: parental leave, death benefit, health cover, support for carers, and voluntary work. There is a special focus on pivotal life transitions that can negatively impact employees’ financial and personal well-being. In providing support at critical times Veolia seeks to help its employees achieve a better work-life balance, a vital pre-condition for lasting engagement by team members.

Results 2 years after rollout

- Of 3,457 people taking maternity or lead-parent leave, 601 (17%) had an improved experience thanks to the benefits offered by Veolia (10 weeks at full basic pay).

- Similarly, 1,984 (24%) of 8,142 people taking paternity or co-parent leave had an improved experience thanks to the benefits offered by Veolia (one week at full basic pay).
- For death benefits, 227 (36%) of 628 reported beneficiaries received a higher payout than previously, in line with Veolia’s undertaking to pay immediate family a sum equal to 6 months of basic pay.

Anticipating climate impacts on working conditions

The reality of climate breakdown, particularly the rise in extreme heat events, has led Veolia to commit to a pioneering process that will prepare the Group and its workforce to tackle these new challenges. A study was conducted at 13 representative sites around the world to anticipate the impact of extreme heat events on working conditions. In addition to identifying good practices, the process resulted in a set of 10 key recommendations, such as creating a basic rehydration, recovery and protection kit, and upgrading collective accommodation units.

2024 and 2025 saw upgrades to 24 accommodation units used by 1,400 employees in the Middle East. The process is currently being rolled out to other sites.

Social requirements extended to the value chain

Extended responsibility means that Veolia ensures its social requirements apply beyond its permanent employees to include agency workers, contractors, and partners involved in its activities. This approach aligns with the Group’s commitments to respecting human rights and helps make sure that ecological transformation delivers the decent and responsible working conditions required for a just transition. Issues surrounding health and safety are subject to special attention (see pages 36-37).

ALLÔ SOLIDARITÉ: LISTENING TO AND SUPPORTING EMPLOYEES WITH PROBLEMS

Veolia provides a special service to support employees facing personal difficulties, Allô Solidarité, operating in France since 2008. Free of charge and available 24/7, this confidential service gives every employee the chance to talk to a qualified professional in a non-judgmental setting. The service tackles issues surrounding budgeting, accommodation, family, disability, work, and safety. For the most serious situations, a welfare fund can provide immediate assistance when no other support is available, for example, to help with emergency accommodation or essential outgoings.

EMPLOYEE ENGAGEMENT DRIVING SHARED VALUE

Exceptional employee engagement is one of Veolia’s most prized assets. An engagement rate⁽¹⁾ of 88%, 14 points higher than the industry benchmark, is a formidable driver for the Group’s performance. Engagement creates lasting social and regional value because it enables employees to become ambassadors for ecological transition.

Disengagement from the workplace, known as quiet quitting, is a major present-day challenge. Veolia has developed an innovative cultural strategy to tackle this issue, with employees offered the conditions they need to support ecological transformation close to home. This incentive approach fosters powerful collective engagement focused on the meaning and local impact of their actions. It centers on clear and transparent communication about Veolia’s values, purpose and strategy, creating a wider sense of belonging to a community that extends beyond the immediate working environment, as underlined by the results of the annual Voice of Resourcers engagement survey.

Collective intelligence in action

Before launching its GreenUp 2024-2027 strategic plan, Veolia ran an unprecedented mass consultation phase known as “+1 Inspire 24-27”. The collective intelligence mechanism covered all stakeholder groups, starting with Veolia employees, and was designed to ensure that goals aligned with operational realities. Gathering testimony from employees around the world meant Veolia could incorporate their field expertise and social expectations when defining its environmental priorities. This co-construction approach not only provided backing for the pivot toward high-impact activities (decarbonization, depollution, regeneration), it also further strengthened the Group’s social pact by highlighting a human resources management mode closely aligned with the challenges of ecological transformation.

The GreenUp e-learning program, which covers Veolia’s purpose, is another awareness-raising mechanism whose impact is felt across Veolia’s wider ecosystem. Once trained, employees feed the information and ecological engagement gained into their own local personal and professional networks.

(1) Composite indicator to assess the level of involvement, motivation and attachment employees feel in relation to their work and employer.
(2) According to the Voice of Resourcers engagement survey (2025).

Positive ripple effect

Likewise, Management Behaviors@Veolia provides guidance about the culture that translates Veolia’s values into consistent real-world behaviors in every part of the world where Veolia operates. By transmitting these values to all stakeholders (teams, customers, contractors, etc.) on a daily basis, managers create a positive ripple effect in local ecosystems. A culture that values feedback and recognition is deeply embedded, inspiring other local actors and helping improve the overall social climate. This process also helps promote the spread of environmental and social best practices. In this way Veolia becomes a driver for lasting local transformation, with economic performance leveraged via its social and environmental impact to create lasting value that benefits all classes of local actors.

ATTRACTIVE CORPORATE CULTURE

The 2025 Voice of Resourcers engagement survey reveals a very high engagement rate of 88%. This impressive figure, aligned with Veolia’s ability to attract and retain staff, helps support regional economic vitality.

- 160,000 employees consulted in 65 countries.
- 84% participation rate, a historic high reflecting the effectiveness of a worldwide network of engaged actors.
- 82% of employees have a positive impression of managerial recognition, pointing to the peaceful social climate.
- 84% of employees feel they have developed their skills, contributing to raising qualification levels in every part of the world where Veolia operates.

RESOURCERS: THE GROUP’S LARGEST SHAREHOLDER

Background

Sequoia is Veolia’s employee share ownership scheme. It embodies a philosophy of sharing and involvement that provides a lasting boost to collective engagement. Today, almost 165,000 current and former employee shareholders own almost 9.35% of Veolia’s share capital. This sizeable holding makes employees the Group’s largest single shareholder.

How?

Operating since 2018, Sequoia has transformed employees into true partners for Veolia. This ambitious employee share ownership scheme gives everybody the chance to directly benefit from the growth they help create.

Results

The 2025 subscription campaign exemplifies this process. Open to over 190,000 employees in 56 countries, it built on the success of the 2024 edition that saw a record 44.9% sign-up rate. Over and above the raw numbers, Sequoia 2025 embodies a philosophy of sharing and engagement. Part of the GreenUp 2024-

2027 strategic plan, the latest edition of Sequoia supports Veolia’s position as a leading force for ecological transformation by accelerating the development of innovative solutions for decarbonization, depollution, and regeneration of natural resources. The employee share ownership scheme cements employees’ role at the heart of the business, actors in their own right sharing in Veolia’s success.

SEQUOIA 2025, ANOTHER SUCCESS

GOVERNANCE AND ORGANIZATION

As with all Veolia’s multifaceted performance targets, its human resources and social performance targets are championed by sponsors on the Executive Committee. Progress toward these objectives is regularly reviewed by the Board of Directors’ Purpose Committee. Governance at Veolia is constructed to be inclusive and participative, ensuring that human resources and social considerations are central to strategic decision-making. It is an approach involving a broad range of internal and external stakeholders. The table below identifies Veolia’s key governance bodies and the specific internal and external collaborations that center on human resources and social issues.

	BOARD OF DIRECTORS					REGULATIONS EXTERNAL AUDIT
	Accounts and Audit Committee	Nominations Committee	Compensation Committee	Research, Innovation and Sustainable Development Committee	Purpose Committee	
Governance	Ethics Committee					
	Executive Management					
	Risk, internal control and internal audit management					
Topics	Environment and social responsibility	Human resources		Preventing corruption and Human rights		
Functional committees	ESG Committee	Ethics and Compliance Committee		Human Rights and Duty of Care Committee		
Specialist functions	Sustainable Development • Technical and Performance Department (Environmental Management Systems) • Sustainable Development Officers (zones)	Human Resources • Human Resources Department • HR networks (business units) • Health and Safety Center of Excellence • Social dialogue bodies	Purchasing • Group Purchasing Department • Purchasing networks (business units) including sustainable purchasing network	Compliance • Compliance Department • Network of Compliance Officers (zones)		
	Development, Strategy and Innovation, Business Support and Performance, Human Resources, Purchasing, Insurance, Legal, Finance, Public Affairs, Information Systems, Security, Communications, Tax, Governance, Veolia Institute, Veolia Foundation					
Internal collaborations	Critical Friends Committee, Future Generations Council, Terra Academia and the “+1, for an ecology in action” initiative					
External stakeholders	Prospects, customers, financial partners, suppliers, public institutions, non-financial rating agencies and investors, NGOs and local opinion leaders, local communities, academic experts					

CREATING VALUE FOR REGIONS AND RESIDENTS

A worldwide actor with deep regional roots, Veolia works very much at the level of local needs, building up resilience in essential services – water, waste, energy – and making tangible improvements to people’s daily lives. Its activities are inherently local and cannot be delocalized, stimulating social cohesion and supporting ecological transformation at the regional level.

Veolia’s contribution is central to its purpose and is set out in its GreenUp 2024-2027 strategic program, which places social responsibility and multifaceted performance at the heart of the Group’s model. This ensures Veolia acts to promote development in ways that are responsible and inclusive. To track its social performance, Veolia conducts a survey every 2 years of how many people benefit from inclusive financial or technical solutions when accessing water, energy or water services.

Supporting local economic development

Veolia’s activities are inherently local and cannot be delocalized. They involve teams, installations and resources close to local needs, contributing to regional economic and social vitality. Every year, over 90% of the Groups’ expenditure is reinvested locally, generating jobs that stimulate local business activities and economies.

Guaranteeing fair access to essential services

Veolia supplied essential services to millions of people in 2025: 110 million with drinking water; 97 million with sewage services and 42 million with household waste collection on behalf of local authorities. Since the UN Sustainable Development Goals were set out in 2015, the Group has provided 9.3 million people with access to drinking water and 10.5 million people with sewage services in countries with insufficient access to these services. Veolia also develops mechanisms designed to ensure the continuity and accessibility of the services in the face of climate and social challenges. The Group designs

solutions that are innovative and suited to local realities to strengthen the resilience of infrastructure and ensure the long-term provision of essential services to all.

Community cooperation and engagement

Veolia’s impact extends beyond its operational activities. By helping people enter the world of work, facilitating volunteering with nonprofits, and raising awareness about environmental issues, the Group actively mobilizes its teams and partners to create value and empower local people to actively drive ecological transformation.

SUPPORTING LOCAL ECONOMIC DEVELOPMENT

Veolia’s activities have a direct impact at the local level. The Group actively participates in the economic and social vitality of the regions where it operates by creating jobs, implementing social outreach initiatives, and adding value to the local business and social ecosystems.

Veolia relies on an extensive local presence to deliver its services for water, waste collection and recovery, and energy. Its teams are based in and around sites and installations located at the heart of regions and communities. The very large sums the Group spends on purchasing, coupled to a business model designed to create value at the local level, make Veolia an important player in the development of the local economic fabric.

Local entities contribute to supporting an ecosystem of suppliers (see pages 30-32). They also support other local and regional actors by generating demand for activities, and supporting employment via initiatives tailored to the issues and realities specific to each part of the world and responding to the challenges of ecological transformation.

Turning environmental challenges into regional opportunities

Veolia’s activities provide tangible answers to people’s concerns, reconciling improved living conditions with economic development.

Over 90%
of the Groups’ expenditure
is reinvested locally
every year

The former Akouédo landfill site transformed into a 6-hectare city park.

One example is the project to rehabilitate the Akouédo landfill site in Abidjan, where environmental challenges are being turned into regional development opportunities. After 53 years in operation, the 90-hectare site is being completely rehabilitated in a process managed by Veolia and PFO Africa. The site now generates 2 MW of clean energy from biogas, treating 80,000 m³ of leachate annually. This avoids the emission of 76,000 metric tons of CO₂ a year. The transformation has created long-term local jobs and offers local residents 6 hectares of urban green space with sports and education facilities, helping to develop tourism and significantly improving local residents’ quality of life.

Pop Up is a program running in France, India and Japan designed to foster collaboration with local incubators and partners. It seeks to identify and support entrepreneurs trying to tackle challenges facing their local area. Solutions suggested, such as developing new

outlets for recovered materials, can then be trialed. Launched in 2020 in Japan, Hamamatsu Pop Up supports social entrepreneurs and the circular economy through a partnership with a community of entrepreneurs at Impact HUB Tokyo. Business creators just starting out are provided with training, mentoring, networking opportunities and help with the search for funding.

In 2025 the program covers 12 partner incubators in France, India and Japan, around 200 social entrepreneurs, and over 20 collaborations between Veolia and participating entrepreneurs.

In 2025 in France, Veolia published a white paper entitled *L’Écologie, pour quoi faire ?*, setting out 70 actionable solutions for ecological transformation aligned with people’s concerns in terms of health, spending power, co-existence, sovereignty, security and democracy. It suggests ways for elected officials and leaders to translate people’s aspirations into concrete actions tailored to their area’s needs.

Supporting transition

The informal sector comprises unregulated and frequently unstructured economic activities operated by countless independent actors that recover and resell recyclable materials. In several countries, collectors such as these play a critical role in plastics recovery, helping to shrink overall waste volumes while generating an income for their communities. But they very often work in dangerous conditions that pose risks in terms of human rights (child labor), health and safety.

Veolia is mindful of these issues and strives to provide structure to the informal sector by developing programs to incorporate informal collections into its supply of secondary raw materials. This improves the safety, traceability and efficiency of these collection streams, principally via digital technologies. ■

COLOMBIA: “RENOVADORES URBANOS”: ACTING TO BOOST RESPONSIBLE RECYCLING

This program brings professional recyclers into an extended producer responsibility system financed by producers via a levy paid to collectors. Veolia helps to improve their standard of living while assisting brands’ efforts to reduce their plastic footprint. The 2025 target was 13,500 metric tons of recycled materials. Over 600 recyclers have taken part in the program since it began.

INDONESIA: LASTING TRANSFORMATION TO PET COLLECTION

An initial program run since 2019 in partnership with Danone-AQUA and local nonprofits aims to establish 10 sustainable collection centers capable of treating 5,400 metric tons a year. The goal is to have a 100%-sustainable supply by 2026. The Veolia Sustainable Collection Centers program extends this initiative to the entire Indonesian archipelago, with ambitious targets: to support 25 centers, collect 2,400 metric tons of plastic waste a year, and train 200 people by 2025.

VEOLIA MEASURES ITS SOCIO-ECONOMIC FOOTPRINT

Background

Veolia measures its worldwide socio-economic footprint every 2 years so it can better understand and publicize its regional impact. It does this by following the Local Footprint® model designed by the Utopies consultancy, a recognized benchmarking tool in France and several other European countries.

How?

- By cross-referencing a number of national and international statistical databases, the model makes it possible to quantify the direct, indirect and induced effects

of the business' activities in terms of jobs supported, added value generated and local contributions.

- The analysis makes it possible to identify regional added value generated by Veolia's activities, i.e. all economic, social and environmental wealth produced locally, over and above financial performance alone.

The analysis for 2023, released in 2024, provides a quantified view of Veolia's indirect economic impact in areas such as job creation and added value generated. The analysis also covers indirect impacts relating to the supplier chain, household consumption (Veolia employees and suppliers) and expenditure by public administrations. Monetary flows in 55 countries where Veolia operates, accounting for more than 98% of turnover, were examined.

Full results of the study can be consulted on a dedicated platform:
<https://empreinte-socio-eco.veolia.com/en>

RESULTS

ENSURING ESSENTIAL SERVICES ARE ACCESSIBLE AND RESILIENT

The services Veolia provides to manage water, energy and waste are essential to the smooth running of regions. This makes it critical that access and continuity are guaranteed, particularly against a backdrop of intensifying climate and health crises that are increasingly undermining these activities.

Veolia leverages its extensive local presence to broaden access to essential services by developing mechanisms that reflect local needs. The mechanisms are included in its contracts and combine financial components (social tariffs, help with bill payments, etc.) with technical solutions (decentralized processes to ensure service continuity or access, etc.). These initiatives benefited 9.2 million people around the world in 2025 across all the Group's activities.

Accessible services for vulnerable groups

In Tanger-Tétouan and Rabat-Salé, in Morocco, Veolia operates social programs for drinking water, sewage and electricity. This provides low-income households and households in outlying districts without connections to public networks with long-term access to these essential services. In 2025, 1.84 million residents benefited from upgraded living conditions thanks to the program.

In the United Kingdom, Veolia has set up a priority services register of customers who need extra help, such as elderly people and people living with a disability or long-term illness. This ensures they receive appropriate support, including via a program called "Keep you warm", which offers fast callouts and alternative heating solutions in the event of a service interruption.

In Cartagena, Colombia, an initiative known as Mi Isla Limpia is designed to tackle technical, environmental and social challenges on the Baru peninsular and Rosario Islands. Veolia organizes collections on foot or electric motorcycle and creates short-term storage facilities to ensure equal access to waste collection services for close to 19,000 inhabitants in 2025.

Guaranteeing continuity of water services

Uninterrupted water supplies are vital to healthcare facilities. In Spain, Veolia has rolled out a system to identify and manage critical installations such as hospitals and health centers to make sure that water supplies are uninterrupted. Dedicated communication and coordination channels have been set up to minimize the impact of any potential disruption to their activities. Priority sites are clearly identified and specific protocols are in place: preventive measures, rapid response to incidents, constant monitoring of water use, and special procedures for communicating with the operators concerned.

Solutions that allow for the effects of climate change

Climate change and its consequences represent an additional threat to the proper operation of its services. Aguas Andinas, a Veolia subsidiary in Chile, launched Biocidadad in 2023. This is a set of targeted measures to secure Santiago’s drinking water supply in the

event of water shortages or increased turbidity in river water following intense rainfall in the Andes. The program focuses on adapting and securing water resources, making the service more resilient. It is based on delivering several projects simultaneously:

- diversifying the water supply through use of underground water and retreated wastewater;
- rolling our resilient storage infrastructure such as reservoirs and boreholes to boost drinking water autonomy for Santiago’s 8 million residents, and establishing alternative pipeline routes to secure supplies during extreme climate events;
- encouraging prudent water use by raising consumer awareness. —

TARGETED SOLUTION FOR TACKLING PFAS

Background

PFAS are chemical compounds encountered in our day-to-day lives. They can be found in clothing, food packaging and cosmetics. They represent an urgent challenge to society and the environment, with impacts on drinking water supplies, ecosystems and communities in every corner of the planet.

Why?

People are increasingly worried about the quality of their water supply, and demand concrete solutions that will protect their health. Municipal and industrial customers have to guarantee that tap water is safe as well as meeting tougher new regulatory standards.

How?

Veolia has developed BeyondPFAS, an end-to-end solution to:

- detect contamination accurately;
- treat water effectively;
- monitor water quality constantly;
- dispose of pollutants responsibly.

30 sites
in the USA have installed Veolia’s solutions for treating regulated PFAS chemical compounds

Goal
100 PFAS treatment systems in operation by 2029

Impact
Offering 2 million Americans access to better quality water

MAKING A LASTING IMPACT ON COMMUNITIES

Veolia mobilizes its workforce and partners to generate positive impacts for and with the communities it serves, by running outreach actions to integrate vulnerable groups, volunteering to support local nonprofits, and raising awareness about key environmental issues.

Veolia’s engagement with the communities it serves is a central pillar of its social performance. The Group actively mobilizes its teams and partners via support with entering the world of work, volunteering with nonprofits, and awareness-raising on environmental issues to create shared value and empower local people to actively drive ecological transformation. This engagement has produced initiatives covering vocational training in environmental service jobs, support for inclusive local employment, and actions to raise awareness.

Fostering the skills needed for ecological transformation

Terra Academia in France is Veolia’s response to the skills shortage in environmental services in the private and public sectors. It is a training and educational institution where actors from the economic, business, academic and nonprofit worlds work together to

develop custom training courses to improve employability and lay the groundwork for the economy of tomorrow at the regional level in France and around the world.

After the 2024 opening of 3 campuses in Arras, Deauville and Paris, 2025 saw Terra Academia deliver training to a diverse cohort, from technicians working in sectors experiencing recruitment difficulties, to local politicians and leaders from private and public sector bodies via the Institute of Higher Ecological Transformation Studies.

Starting in September 2026, Terra Academia will offer Ecol’ab Orientation, a program to support school-leavers and students wanting to begin a career in a profession connected to ecological transformation.

Encouraging professional integration and inclusive local employment

Veolia actively contributes to regional social cohesion by supporting the creation of long-term jobs, including for people who have become alienated from the job market. These targeted programs boost local economic activity and social inclusion.

For example, a program known as STARTer, run by the Veolia Fondation in the Czech Republic, supports job creation in three of the country’s regions (Moravia-Silesia, Olomouc, and Central Bohemia), focusing on rare traditional occupations and crafts that generate social and economic value.

Terra Academia, a school and accelerator upskilling and reskilling for ecological transformation.

Veolia runs numerous educational initiatives and shares best practices to build awareness and expand skill sets locally.

The STARTer initiative gives Veolia employees the opportunity to sponsor the supported start-ups. Since 2000, 2,875 jobs have been created, 420 of them for people living with a disability.

Environmental education and sharing expertise

Education and awareness are vital if people are to become genuine agents of ecological transformation. Veolia runs numerous educational initiatives and shares best practices, targeting everybody from professionals to school children to build awareness and expand skill sets locally.

Ecofactory in Milwaukee runs real-world initiatives raising awareness of environmental issues, illustrating Veolia USA’s community engagement. Actions include operating a boat to cleanup waterways, river clean-up

operations involving employees and partners, as well as open days at the wastewater treatment plant and special installations to protect the site’s peregrine falcon population.

In China, Veolia has diversified its educational efforts surrounding the issue of plastic recycling to provide training to professionals in partnership with nonprofits and experts from the Chinese Academy of Engineering. Technical sessions are held to examine the issue of plastic pollution of the seas and technological innovations to improve recycling quality. The teams also teach children in primary schools about waste sorting and the dangers of plastic waste in the sea.

**Over

2,500
actions around the world,
working with over
1,000 partners

Veolia Cares: supporting community spirit

The Group's Veolia Cares program has established a baseline package of benefits that also provides every employee with one day of paid time-off to volunteer in their community. They are free to spend their day on general interest projects surrounding environmental protection or social inclusion, working in the field or raising awareness, alone or with colleagues.

As part of its drive to make it easier for employees to engage, the Group has set up a platform in France called "Resourcers for Communities" that lists requests from local nonprofits and makes it simpler for people to get involved. The annual survey of platform users indicates that 32% of employees develop on-going ties to the nonprofits, working with them in their spare time.

Acting for the environment, health and inclusion

In 2025, Veolia's employees in the UK were out in force celebrating Volunteers' Week and World Environment Day:

- over 90 employees joined efforts to clean up the shoreline;
- in partnership with University Hospitals of Leicester NHS Trust, 1,860 trees belonging to 14 different species were planted to improve air quality and biodiversity while creating spaces that will benefit the physical and mental well-being of patients and health workers.

Working with the charity Shelter, volunteer team members helped to upcycle furniture, boosting the circular economy and helping people in need. ■■■

LATIN AMERICA: RAISING AWARENESS ABOUT ENVIRONMENTAL PROBLEMS

Background

Educating young people is an essential part of accelerating ecological transformation. In 2012 Veolia launched a program called "Alrededor de Iberoamérica", in partnership with the Organization of Ibero-American States, aimed at pupils in the 10-11 age group at public schools in countries where Veolia operates: Argentina, Brazil, Chile, Colombia, Ecuador, Mexico, Panama, and Peru.

Why?

This wide-reaching educational operation aims to teach school children about environmental problems and challenges. By sharing messages on environmental protection, renewable energy, recycling and preserving biodiversity, the pupils become agents of change in their communities, fostering the emergence of societies that are more resilient in the face of the climate emergency.

How?

Teachers are provided with educational aids setting out activities to run with their classes. A competition encourages pupils to come up with solutions for optimizing how renewable energy is used. Winners enjoy educational trips to high-profile sites: they visited Lima and Machu Picchu in 2024.

**Over
200,000**
pupils involved

BUILDING SUSTAINABLE ECOSYSTEMS

Veolia's GreenUp 2024-2027 strategic program places alliances at the heart of ecological transformation. The Group mobilizes networks of partners and local actors to build lasting ecosystems rooted in trust, dialogue, and unwavering respect for human rights.

The collaborative model Veolia has designed makes it easier to combine expertise from different fields, pool resources, and coordinate actions to tackle the key ecological challenges addressed in GreenUp: decarbonizing usages, depolluting the environment, and regenerating resources.

In line with its purpose, the Group's anchors its prosperity in its usefulness to all its stakeholders and the regions where it operates. This is why it strives to construct systems for cooperation with all relevant public and private actors (customers, shareholders, employees, suppliers, local people, and future generations) to ensure it combines performance with usefulness and collective impact.

Taking action to transform our purchasing processes

Veolia uses its purchasing processes as a lever for real-world actions to make ecological transformation a reality. With its focus firmly on ethical criteria and grassroots initiatives, Veolia collaborates with partners to foster the emergence of practices that are more inclusive and more sustainable in every region.

Developing long-term dialogue with stakeholders

Dialogue with civil society informs every level of Veolia's governance. The "+1, for an ecology in action" process, Future Generations Council, and Stakeholders Assembly (launching in April 2026) together form highly fruitful ongoing consultation mechanisms offering diverse views and expertise that feed into the Group's strategic decision-making.

Social dialogue: social innovations for regional transformation

Social dialogue at Veolia is rooted in permanent consultations. With over 1,500 collective bargaining agreements signed every year and representative bodies covering close to 90% of employees, Veolia works with trade unions on jointly creating sustainable solutions to adapt to changes in its professions, support employment, and boost social cohesion.

Protecting human rights to ensure a just ecological transformation

Veolia's unwavering respect for human rights translates into mechanisms covering duty of care, evaluation, and training. Together they guarantee that the dignity, health and safety of everybody concerned is protected.

Acting together for a lasting impact

As a catalyst for environmental and social development initiatives, the Veolia Foundation works with NGOs, local authorities, and employee volunteers to bring about lasting regional change and multiply the social impacts of its actions.

TAKING ACTION TO TRANSFORM OUR PURCHASING PROCESSES

Rethinking purchasing and relationships with suppliers is essential to successful ecological transformation. Thanks to its responsible purchasing policy, Veolia encourages practices that are ethical as well as socially and environmentally positive and mobilizes its suppliers to promote sustainability on a wider scale.

The Group pays careful attention to establishing fair, transparent, and sustainable relationships with its suppliers. Its requirements cover issues including respecting regulations, safety and working conditions, and managing the social and environmental impacts of business activities.

Signing the Suppliers Charter is a contract requirement

Veolia's requirements are formalized in the Supplier Charter. Systematically transmitted and signed during all tendering consultations, the charter sets out what is required of a Veolia partner in terms of obeying the law, preventing corruption, respecting human rights, decent working conditions, employee health and safety, and management of environmental impacts.

Suppliers undertake to adhere to these principles within their own supply chains, which promotes the spread of responsible practices beyond tier 1. These contract requirements are backed by concrete operational initiatives that deliver lasting change in supply chains. Specifically, the Group's subcontractors are required to make major efforts via a proactive and collaborative approach to health and safety that will also benefit their own employees.

In this way, the Supplier Charter actively helps deliver improvements to suppliers' social and environmental performance. The charter also requires regular inspections that are backed, where needed, by corrective action plans.

TRANSFORMING ENERGY SUPPLIES AT THE WATERTech SITE IN SON EN BREUGEL

This project to transform energy supplies for a wastewater treatment plant illustrates how multifaceted performance feeds into purchasing initiatives.

On the economic front, the plant follows a total cost of ownership (TCO) model to reduce costs, serving to optimize the complete lifecycle. Environmental efforts now focus on 3 areas: decarbonization by switching to renewable energy, the circular economy, and preserving local biodiversity. Socially, the project benefits the local community while also supporting businesses and diversity. Lastly, the innovative solutions in place act as boosters to Veolia's reputation and align with stakeholders' expectations, particularly in commercial terms.

The monitoring mechanism also reacts to any alerts received, particularly from partner's employees using the whistleblower system. Actions in place include tracking inclusive purchasing in France, while internationally Veolia rolls out initiatives aligned with local realities to encourage diversity, inclusion, and community involvement.

The Group Purchasing Department's Sustainable Procurement Awards identify and reward excellence in sustainable purchasing. In 2025, the awards involved 20 business units that entered a total of 67 projects centering on 4 key themes: the circular economy, sustainable energy and sourcing, innovation, and inclusiveness and local communities. The awards aim to act as catalysts for sharing good practices between Group entities, encouraging mutual inspiration and the replication of the most effective initiatives around the world.

Fostering diversity and inclusion at suppliers

Each contract represents an opportunity to bring about far-reaching transformations in behaviors across an ecosystem of partners, creating social and environmental value that extends well beyond Veolia alone. It is through these initiatives that Veolia demonstrates how purchases can be more than just transactions, and can drive genuine social and economic change. ■

INCENTIVE MEASURES DRIVING PROGRESS IN CSR PRACTICES

A pioneering Veolia initiative in Romania combines EcoVadis CSR ratings⁽¹⁾ with a reverse factoring program run in partnership with ING bank. Suppliers achieving good CSR ratings benefit from more favorable payment terms. Veolia is also strengthening its partnerships with actors committed to continuously improving their processes. The initiative helps develop a sustainable upstream value chain by driving progress in HR and environmental practices.

INTEGRATE DIVERSITY, EQUAL OPPORTUNITIES, AND INCLUSION WHEN RECRUITING AGENCY WORKERS

Veolia in the United Kingdom partners with Comensura, a company that specializes in outsourced management of contract workers and service suppliers. The partnership has resulted in the recruitment of refugees from Ukraine, ex-prisoners, women, and people aged over 55, providing more than 80 job opportunities in the waste management sector.

(1) EcoVadis provides reliable sustainability ratings that are recognized worldwide, helping businesses to reduce risks, improve their performance, and accelerate positive impacts for society and our planet.

AUSTRALIA: PARTNERING WITH INDIGENOUS SUPPLIERS

Background

In Australia and New Zealand Veolia operates a specific supplier policy for businesses owned by Aboriginal and Torres Strait Islander peoples. The initiative is part of Veolia's Reconciliation Action Plan and uses the Group purchasing policy to support Indigenous communities who are particularly vulnerable to environmental change.

Why?

Indigenous communities are key stakeholders in Veolia's social license to operate in the region. The aim is to encourage their inclusion in the economy, meet customer expectations surrounding supplier diversity, and honor these communities' unique relationship to the land. In this way, purchasing policy becomes a lever for inclusivity.

How?

Veolia has drafted a specific purchasing policy that is included in its tender documents. It is backed by a range of in-house awareness-raising actions, partnerships with certification bodies (Supply Nation), and support for Indigenous-owned businesses to help them build their capacity to bid for contracts.

DEVELOPING LONG-TERM DIALOGUE WITH STAKEHOLDERS

Veolia has established a number of mechanisms for discussion and dialogue with its stakeholders (businesses, governments and local authorities, financial partners, private citizens, employees, NGOs, and researchers). Together they represent a lever for increasing the pace of ecological transformation.

Against a background of major geopolitical, climate and ecological crises, with biodiversity and resources facing unprecedented threats, Veolia believes that knowledge, experience and dialogue are essential levers for accelerating the pace of ecological transformation and designing solutions that align with local realities.

This is why the Group fosters continuous dialogue with all its stakeholders – at every level, locally and internationally – to listen, understand, analyze and jointly design and build solutions that make a positive impact on ecosystems, organizations and people. With its commitment to this process stretching back over more than a decade, Veolia has structured its dialogue arrangements around a number of major initiatives: Critical Friends committee, adoption of a purpose and the multifaceted performance concept in 2019, creation of the “+1, for an ecology in action” cooperation mechanism in 2021, and more recently the establishment of a Future Generations Council in April 2025.

Listening in order to understand and take action

Listening is the bedrock of Veolia's approach. It strives at all times to identify and understand the requirements of its stakeholders, including customers, employees, local communities, and investors, so it can choose suitable actions.

The Ecological Transformation Barometer, an opinion survey conducted in 26 countries accounting for 60% of the global population, illustrates this commitment. Since 2022, this global opinion poll has highlighted growing acceptance of ecological innovations, particularly water recycling, and strong demand for sustainable local solutions.

Listening in-house is every bit as important. Veolia uses the Voice of Resources to measure employee engagement and the Net Promoter Score to assess customer satisfaction, constantly feeding results into its thinking and adjusting its strategic priorities accordingly.

Sharing the Group's growth and value creation with employees

As well as being at the frontline of ecological transformation, Veolia's employees are also stakeholders in its success. The Sequoia employee share ownership scheme underlines Veolia's determination to directly involve its employees in this collective success. As of the end of 2025, employees own 9.35% of share capital in the Group (see page 20 for more information).

Building together through dialogue

Dialogue is the cornerstone of a governance that is more inclusive and participative, designed to support solutions that reflect realities on the ground.

The Veolia Institute and the Critical Friends committee are 2 platforms for discussions and new thinking. The Veolia Institute promotes permanent dialogue with experts, philosophers, anthropologists, business leaders, policymakers, and actors in the field, examining issues such as health and the environment, sufficiency, access to essential services, biodiversity, and present-day environmental and social changes.

The Critical Friends, independent personalities from nonprofits, institutions, academia and partner businesses, provide a critical outsider’s view of the Group’s choices and strategies in a process created to support its drive for continuous progress.

Transforming through collaboration: strategic alliances

Cooperation complements Veolia’s approach to listening and dialogue. The initiative for fostering dialogue between Veolia’s stakeholders, “+1, for an ecology in action”, embodies this commitment by uniting stakeholders at the local, national and international levels in support of real-world projects. New “+1” collectives have been formed, including “+1 Ariane” which incorporates external governance in a contract in Nice, and “+1, micropollutants” by Water Technologies, aimed at bringing together key actors in the fight against micropollutants to improve protection for ecosystems and, by extension, public health.

VEOLIA’S MAIN INITIATIVES AND FORUMS FOR LISTENING TO AND ENGAGING WITH ITS STAKEHOLDERS

FUTURE GENERATIONS COUNCIL FOR LISTENING TO THE VOICE OF YOUNG PEOPLE FROM AROUND THE WORLD

What?

Established by Veolia in April 2025, the Future Generations Council is a platform for dialogue between Veolia’s CEO Estelle Brachlianoff and 30 young leaders.

Why?

To embed voices from new generations into the Group’s decision-making: 30 young people from around the world (15 Veolia employees and 15 external members aged under 30) put forward actionable ideas for picking up the pace of ecological transformation.

How?

Council members’ 3-year mandate is divided into 2 cycles. Each cycle comprises 3 working phases.

Phase 1 Problem definition

Identify the problem and its local and global impacts.

Phase 2 Prospective

Identify the risks inherent in ignoring the problem and define desirable futures.

Phase 3 Implementation

Define opportunities for solutions and actions to improve practices that help drive ecological transformation.

In-depth discussions with Estelle Brachlianoff are held at the end of each working phase.

Deliverables

The mandate for the 1st working cycle, running until April 2026, is to present Veolia with levers for actions to invent the industry of the future: an industry rooted in the regions, capable of transforming uncertainty (technological, geopolitical, environmental, etc.) into a driver for resilience and value creation, and that takes account of planetary boundaries in the ways Veolia operates.

30 young leaders from around the world comprise the Future Generations Council

Their first working theme for 2025-2026: suggest levers for actions that will invent the industry of the future

SOCIAL DIALOGUE VEOLIA USES SOCIAL INNOVATIONS TO TRANSFORM REGIONS

Veolia is committed to innovative social dialogue in every part of the world. With 8,349 employee representatives in 51 countries and 1,489 collective bargaining agreements signed in 2025, this collaborative approach transforms local practices and contributes to local economic and social development.

Social dialogue is a non-negotiable pillar of Veolia's regional actions, with far-reaching impacts on human resources and society beyond the confines of the Group alone. This approach transforms the relationship between Veolia and its employees while also generating positive impacts across every community where the Group operates.

Collective intelligence and collaborative mindset

In 2015, Veolia developed an innovative social dialogue methodology based on consultation and dissemination of good practices at every level of the business. It also established common social dialogue bodies, known as "bureaus", at the French and European levels, creating a collaborative dynamic that makes it possible to anticipate the economic, social and technological transformations at play in the business. This approach helps shape an exemplary governance model that inspires other economic and institutional actors, ensuring that its impacts are felt beyond Veolia alone.

The remarkable geographical footprint of Veolia's social dialogue is evidence of this local and regional impact: 88.3% of Group employees are covered by a social dialogue body, with 8,349 employee representatives worldwide. This extensive presence is spread across 51 countries, creating a dense social network that contributes to regional stability and development. In France, where there is a 100% rate of cover, these excellent social conditions apply to entire local economic ecosystems.

The signature of 1,489 collective bargaining agreements in 2025 underlines the vigor and maturity of this commitment to dialogue. The agreements, negotiated to closely reflect realities in the field, mean workplace policies can be tailored to local contexts in terms of employment, training, health, and economic development.

Social dialogue driving innovation

Collective intelligence workshops on the use of artificial intelligence, run with employee representatives, made it possible to identify priority applications for strengthening health and safety and improving operational efficiency. Tried and tested during social dialogue processes, these initiatives strengthen the uptake and regional spread of new technologies.

Veolia's European Works Council, which represents around two thirds of employees in 17 countries, acts as a testbed for social innovation. Joint resolutions adopted in 2024 on health, safety, and well-being at work resulted in strict standards that have inspired changes in social policies and contribute to improving working conditions across all Veolia entities in Europe.

Veolia's impact on society has been amplified through its involvement with the United Nations Global Compact initiative since 2003. The Group's active participation in international discussions provide global bodies with

88.3%
of Group employees
covered by a social
dialogue body

examples of best practices from the field, as well as allowing Veolia to roll out the best social innovations in the regions where it operates.

This influence is clearly visible in the signature of a European Framework Agreement on Diversity and Inclusion concluded with 19 trade union representatives from 13 countries and the European Federation of Public Service Unions (EPSU). In force in the 17 countries covered by Veolia's European Works Council, the agreement promotes inclusive, fair and respectful working environments, reconciling social performance with employee well-being.

Two directors and a non-voting member represent employees on the Board of Directors, further consolidating the commitment to shared governance. This direct representation ensures that strategic decision-making takes account of local contexts and the expectations of people working in the field.

In addition, measures in place to support trade union activity and training for social partners create a workplace talent pool widely recognized beyond the Group. After training, employees often go on to become leading voices in local and social development. They help spread the social model that Veolia stands for everywhere the Group operates.

By combining local involvement with social innovations and an international outlook, Veolia turns its social dialogue processes into a strategic pillar for its performance and a lasting lever for encouraging inclusive ecological transformation.

PROTECTING HUMAN RIGHTS TO ENSURE A JUST ECOLOGICAL TRANSFORMATION

Respect for human rights is a fundamental principle for Veolia. The Group follows a strict policy designed to protect and promote basic rights, and operates an absolute ban on all forms of forced and child labor. This requirement applies to all employees, partners, and local communities.

Veolia undertakes to promote and protect human rights at every stage of its activities, in accordance with its values and purpose and in line with international standards including the United Nations Guiding Principles on Business and Human Rights, the Ten Principles of the UN Global Compact, and the ILO Fundamental Conventions.

Comprehensive multisector approach

Veolia operates a comprehensive multisector human rights policy that addresses the rights of people impacted by its activities as well as fundamental workplace rights. The policy sets out the Group’s unwavering opposition to all forms of forced and child labor and discriminatory practices, and its support for freedom of association and collective bargaining as well as health and safety at work. Its policy includes respect for the right to a healthy environment, access to water and sewage services, and protection of the rights of local communities.

Duty of care: specialist committee

Responsibility for human rights and duty of care is coordinated at the highest level of the organization. A committee headed by Veolia’s General Counsel and including head office and zone functional departments ensures human rights are embedded at the heart of all Veolia’s practices. The committee leads in-house discussions, checks that the Group’s values and undertakings are respected, and oversees implementation of the vigilance plan. It issues recommendations and actively welcomes approaches from civil society.

COMBATING ILLEGAL WORKING

Illegal working is a major risk and a high priority, especially in complex subcontracting chains. This includes undeclared working, undeclared hiring, employing undocumented workers, and failure to observe local employment rights, which all have serious consequences. Veolia’s strategy operates across 3 spheres.

- Prevent: duty-of-care culture and awareness-raising for its teams.
- Detect: rolling out tools to monitor suppliers.
- Remedy: applying corrective measures and contract penalties where non-compliance is identified.

Its actions include awareness-raising via a duty-of-care e-learning module, training webinars, strict contract clauses requiring subcontractor compliance, and a management tool for checking that suppliers’ paperwork is in order.

Mobilizing Veolia’s suppliers

In its supply chain, Veolia uses human rights criteria when selecting and evaluating its suppliers: specific contract clauses, the requirement to comply with international standards, targeted audits, and improvement plans where discrepancies are observed. High-risk parts of the world are monitored more strictly to guard against illegal working, failure to pay a decent wage or respect requirements in terms of working hours, and health and safety infringements. Training and awareness-raising is provided to Veolia employees, particularly an e-learning module on illegal working. By embedding respect for human rights into every level of its organization, Veolia reaffirms its belief that ecological transformation can only be sustainable when human dignity is respected. Veolia adopts rigorous management and processes rooted in continuous improvement to prevent risks, strengthen vigilance, and promote exemplary practices in every area of its activities and in every part of the world. ■

“VIGILANCE” RISK MAPPING: UPDATED METHODOLOGY

Since 2024 Veolia’s mapping methodology has fully complied with the French Law of March 27, 2017, on the duty of care.

- The process uses guidelines drafted on the basis of the main international treaties on human rights, risks identified by business units, and contributions from the Group’s specialist experts.
- The map is updated annually to reflect any organizational or regulatory changes.
- It is used to create a vigilance plan and action plans.
- In addition, a continuous improvement process actively involves employee representative bodies in assessing risks and defining action measures during the map updating process. Involving employee representatives provides a more rounded and balanced view of problems, and also ensures that operational realities are properly recognized.

Risks	Priority for action
Human rights and fundamental freedoms	
Illegal employment	P1
Harmful working conditions	P2
Infringement of children’s rights Torture, cruel, inhuman or degrading treatment and slavery	P3
Infringement of freedom of association and social dialogue	P3
Discriminatory practices	P3
Damage to the way of life of local communities	P3
Environment	
Damage to biodiversity and water and marine resources	P2
Discharges and emissions	P2
Management of chemical products or pollutants	P3
Waste management	P3
Health and safety	
Priority high-risk activities	P1
Psychosocial risks	P1
Other high-risk activities	P3

Each risk is evaluated for 3 criteria: probability, severity, and level of control. They are then prioritized to identify the most significant risks and define priorities for action at 3 levels: P1: very high priority for action; P2: high priority for action; P3: priority for action.

ACTING TOGETHER FOR A LASTING IMPACT

For over 20 years the Veolia Foundation has worked to translate Veolia’s technical expertise into concrete solutions to help with humanitarian work, environmental protection, and social inclusion. It works around the world in close cooperation with an ecosystem of committed partners: nonprofits, NGOs, local authorities, institutions, and Veolia Group employees.

3 areas for action and deeper operational ties

The Veolia Foundation was created in 2004 to support public interest projects in 3 fields.

- Humanitarian emergencies and development assistance:
 - organizing emergency interventions for natural disasters and humanitarian crises;
 - improving living conditions by providing access to basic services and healthcare, particularly for the most vulnerable groups;
 - supporting long-term development projects in locations without existing infrastructure.
- Protecting the environment and biodiversity: raising awareness of these issues and supporting ambitious projects to educate people and restore natural environments by providing funding and publicity.
- Social inclusion through work and social ties: promoting transition into work.

Its work is structured around 3 levers of action:

- skills sponsorship;
- financial support;
- developing specialist equipment for humanitarian missions.

Employee involvement is central

Veoliaforce skills sponsorship is a major feature of the Veolia Foundation’s work. It provides expertise from Veolia’s employees to nonprofit partners for humanitarian emergencies and development projects. This involvement lends the entire ecosystem a human dimension, with employees working in the field as sponsors or Veoliaforce volunteers to run projects focused on direct interactions with beneficiaries and local communities.

Since 2024, the Foundation has extended its international scope by setting up a network of in-house ambassadors in every part of the world where the Group operates. This helps it act in the field, improves its understanding of needs, and facilitates its presence whenever events require it.

Magnifying impacts through cooperation

The Veolia Foundation brings together a network of nonprofit, institutional and government actors whose collective actions can provide answers to the complex challenges and crises of our age: ecological, social, migratory, and so on.

The Foundation has longstanding collaborations in place with UN agencies including UNICEF since 2008, the United Nations High Commissioner for Refugees (UNHCR), and

more recently the International Organization for Migration (IOM). It continues to work with its original NGO partners such as the French Red Cross, Doctors Without Borders and Solidarités International. Through this web of connections, the Foundation shows how cooperation, shared expertise, and technical responsiveness remain the best ways to amplify the impact of individual actions.

Emergency solutions where most needed

Working with its partners, the Foundation implements solutions to provide access to water and sewage services. Its Aquaforce mobile drinking water plants, for example, can be operational in a few hours to provide

supplies to people in the aftermath of a natural disaster. Saniforce, its low-carbon solution for treating fecal sludge in humanitarian settings, can eliminate sewage-borne pathologies and protect public health in affected localities.

The Foundation also provides NGO and UN agency staff with training in the use of these units, which have become standard components of humanitarian actions.

In 2025, the Veolia Foundation took part in 20 development aid and humanitarian emergency projects. 176 volunteers were involved in 40 Veoliaforce skills sponsorship missions. ■

AQUAFORCE: UNITS DEPLOYED TO PROVIDE EMERGENCY ACCESS TO SAFE WATER

Background

Access to essential basic services is often disrupted or completely absent during humanitarian or climate emergencies. Deploying a solution to rapidly provide safe water to local people affected by the disasters is crucial.

Why?

Humanitarian actors that manage access to essential services in emergency situations and, in the longer term, camps for displaced persons and refugees, are looking for solutions. The Veolia Foundation has the answer: helped by experts from Veoliaforce, it deploys mobile units designed for situations where existing infrastructure is damaged or non-existent.

How?

The Veolia Foundation has designed Aquaforce units, mobile water treatment installations developed specifically for the humanitarian sector. They can quickly produce a safe water supply from local water sources. Fully operational in just a few hours, they supply safe water to between 2,000 and 15,000 people a day.

Restoring access
to safe water
for thousands
of people

Boosting regional resilience
by training local NGOs

In 2025,
